

CSE 114 - Fundamentals of Computer Programming – 2026 Spring

Hw 2

Write a function `numeric()` which receives a digit character and returns its numeric value. For example if '2' is the input, 2 will be the output. If the input is not a digit return -1.

Write a function `to_lower()` that takes an uppercase letter and returns its lowercase form (ex: 'B' -> 'b'). If the input is not an uppercase letter return 0.

Write the main function which reads a character and,

- first sends it to `numeric()` and receives the result.
If the result is in the range [0,9] print an output similar to the following:
Numeric value of your char is: 8
If not, send it to `to_lower()` and receive the result.
If the result is non-zero print an output similar to the following:
Lowercase equivalent: 'h'
If zero print **Neither a digit nor a capital letter!**

Submission – Write a single C program for all parts and submit your file with the given format:
`name_surname.c`
